

SENDEF

iPDU L20

Programmable AC Power Distribution Units

Software Controlled
SCPI over IP

Touch Screen TFT LCD display for manual operation

Long term data acquisition

Current Limiting with Cutoff and Warn options

Over/Under Voltage protection with different Warn and Cutoff levels

19" Rack mount

SENDEF iPDU is a software-controlled, intelligent Power Distribution Unit, designed for use in industrial automation and automatic test equipments.

The unit has 16 output channels grouped into 4 groups. Although each channel can be turned on and off independently, current measurements are made on the basis of groups.

The front panel comprises a 4.3" touch screen TFT display, and an emergency stop button. Input is protected by this 20A thermal circuit breaker which is located in the front panel, too.

Channels can be controlled from the touch screen or with the buttons located on the front panel. There is an LED indicator on the relevant button that shows The relevant channel on/off status

Output channels can be turned on/off sequentially at specified times. Desired channels can be included/excluded in/from the on/off scenario. Sequential on/off times are adjustable between 0.1 seconds and 999.9 seconds.

iPDU supports **SCPI** protocol. Users can integrate the units into their own environment using the SCPI protocol over the Ethernet interface.

All the settings and configurations can be made through Touch Screen TFT LCD on the front panel

There is a 105 dBA buzzer inside the PDU. Besides visual warnings, current/voltage anomalies are notified to the user audibly.

There is a real time counter (ETI) on the PDU. ETI is independent of all other components and it shows the total time that the unit has remained active.

Features

- *19" Rack Mount*
- *Input voltage measurement*
- *Precision output current measurement for each group (4 groups of 4 channels)*
- *SCPI over TCP/IP*
- *Adjustable Under/Over Voltage Protection (Warning and Cut-off limits can be set independently)*
- *Adjustable Current Limit Function (Independent for each output group. With Cut/Warn options)*
- *Sequential on-off (0.1 sec – 999.9secs)*
- *Input/Output indicators*
- *Elapsed Time Indicator*
- *IEC 320 C13/C19 outputs*
- *Ambient temperature sensor*

→ *iPDU can be ordered in different input-output configurations according to user requirements. See Part Numbering Section.*

→ *This iPDU is not compatible with PDU Manager Software*

SENDEF™ and **iPDU™** are Registered Trade Marks of Sendef Savunma Inc.

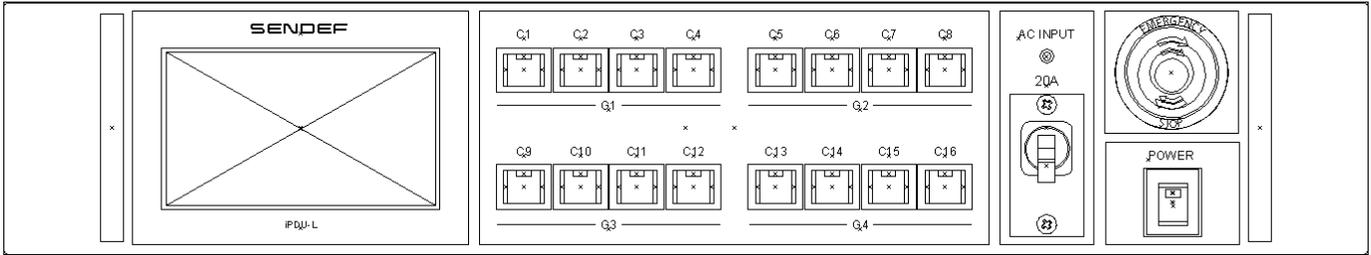

iPDU L20

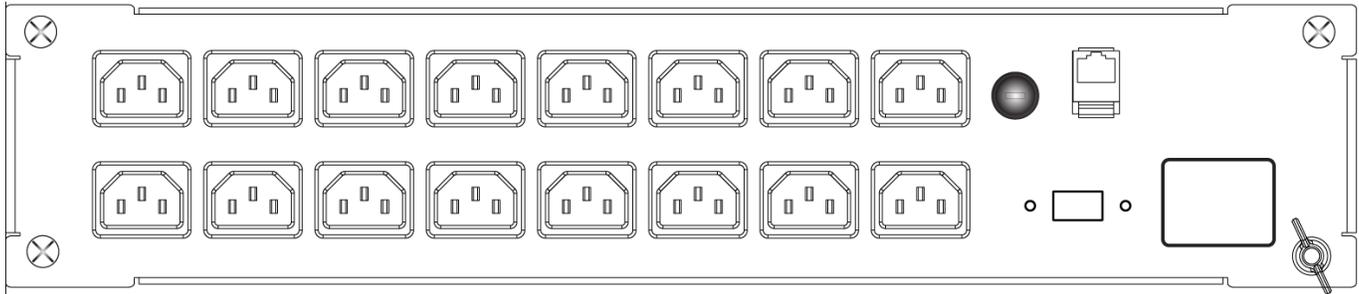

Specifications (Based on iPDU-M60-3G30-3P30)

Input	220VAC 50/60Hz 20A
Output Single Phase	220VAC1~ 50/60Hz
Current Output Per Channel (1~Outputs)	16A
Input Main Circuit Breaker (On/Off Switch)	20A
Single Phase Outlets	16 x 1 IEC-C13
Current Measurement	4 groups / 4 channelseach
Total Output Power	4.4kW

iPDU L20 Main Chassis Mechanical Outline²

iPDU-L20 Front

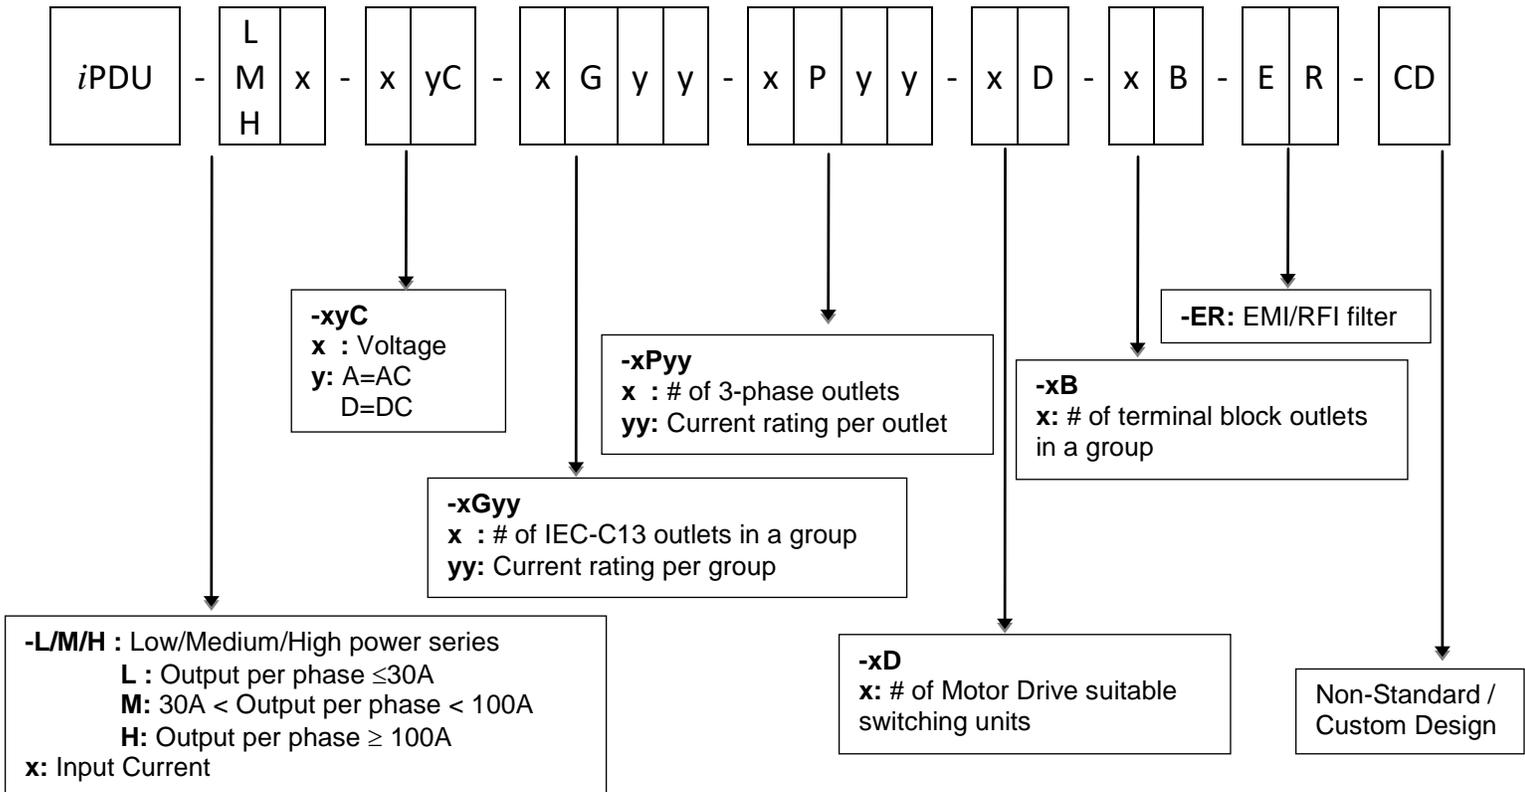

iPDU-L20 Back

Dimensions:(Based on iPDU-M60-3G30-3P30)

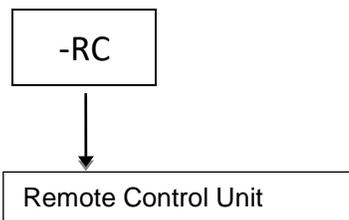

- Front : 482.6mm x 177.3mm (4U)
- Back : 425mm x 131.5mm
- Depth :420mm (excluding handles and connectors)

² Drawings are for reference only. Not to scale. The design depends on the model and the options.

iPDU Series Power Distribution Units Part Number Guide

* Some of the options are mutually exclusive. e.g. a DC unit can not be configured with 3-phase outputs. Please check before ordering.
